IXP's team is as experts and leaders in public safety and emergency communications projects. We provide assistance in strategic planning and renovation within emergency and operations centers.

Through our consulting services, IXP **optimizes service and technology levels**, while keeping costs sustainable. We understand each client has varying processes, staffing, resources, technology, governance, and fiscal requirements; therefore, we incorporate all those variables and work to design the **best fit solution** to meet individual and group goals.

Our consulting services provide objective information to decision-makers regarding the existing environment, potential future challenges and adequate solutions that can achieve long-term improvements in service levels and cost efficiencies.

Our solutions are designed, developed, and delivered using our proprietary **SAIF® Methodology**. This ensures that our customers receive the highest quality, performance, and value.

Following our **SAIF® Methodology**, we conduct a detailed assessment and deliver vendor-neutral recommendations that provide our clients with the knowledge needed to make their vision a reality. From the assessment we produce a **Business Case** is distributed the best possible solutions and documents costs and implementation requirements.
